The hologo package

Heiko Oberdiek* <heiko.oberdiek at googlemail.com>

2017/05/01 v1.13

Abstract

This package starts a collection of logos with support for bookmarks strings.

1 Documentation

1.1 Logo macros

\hologo $\{\langle name \rangle\}$

Macro \hologo sets the logo with name $\langle name \rangle.$ The following table shows the supported names.

name	variant	logo	since
(La)TeX		(LA)T _E X	2011/10/01
AmSLaTeX		$\mathcal{A}_{\mathcal{M}}\overline{\mathcal{S}}$ -I $^{\sharp}\mathrm{T}_{\mathrm{E}}\mathrm{X}$	2010/04/16
AmSTeX		$\mathcal{A}_{\mathcal{M}}\mathcal{S} ext{-}\mathrm{T}_{\mathrm{E}}\mathrm{X}$	2010/04/16
biber		biber	2011/10/01
BibTeX		BibTeX	2011/10/01
BibTeX	sf	BibTeX	2011/10/01
BibTeX	sc	BibTeX	2011/10/01
BibTeX8		BibTeX8	2011/11/22

\Hologo $\{\langle name \rangle\}$

Macro \Hologo starts the logo $\langle name \rangle$ with an upper case letter. As an exception small greek letters are not converted to upper case. Examples, see ε -TEX and ε_X TEX.

1.2 Setup macros

The package does not support package options, but the following setup macros can be used to set options.

\hologoSetup $\{\langle key\ value\ list \rangle\}$

Macro \hologoSetup sets global options.

$\verb|\hologoLogoSetup {|\langle logo \rangle| } {|\langle key \ value \ list \rangle|}$

Some options can also be used to configure a logo. These settings take precedence over global option settings.

1.3 Options

There are boolean and string options:

Boolean option: It takes true or false as value. If the value is omitted, then true is used.

String option: A value must be given as string. (But the string might be empty.)

The following options can be used both in \hologoSetup and \hologoLogoSetup:

break: enables or disables line breaks inside the logo. This setting is refined by options hyphenbreak, spacebreak or discretionarybreak. Default is false.

hyphenbreak: enables or disables the line break right after the hyphen character.

spacebreak: enables or disables line breaks at space characters.

discretionarybreak: enables or disables line breaks at hyphenation points (inserted by \-).

Macro \hologoLogoSetup also knows:

variant: This is a string option. It specifies a variant of a logo that must exist.

An empty string selects the package default variant.

Example:

```
\hologoSetup{break=false}
\hologoLogoSetup{plainTeX}{variant=hyphen,hyphenbreak}
Then "plain-TEX" contains one break point after the hyphen.
```

1.4 Driver options

Sometimes graphical operations are needed to construct some glyphs (e.g. X_{\text{T}}I_{\text{E}}X). If package graphics or package pgf are found, then the macros are taken from there. Otherwise the package defines its own operations and therefore needs the driver information. Many drivers are detected automatically (pdfT_{\text{E}}X/LuaT_{\text{E}}X in PDF mode, X_{\text{T}}I_{\text{E}}X, VT_{\text{E}}X). These have precedence over a driver option. The driver can be given as package option or using \hologoDriverSetup. The following list contains the recognized driver options:

- pdftex, luatex
- dvipdfm, dvipdfmx
- dvips, dvipsone, xdvi
- xetex
- vtex

The left driver of a line is the driver name that is used internally. The following names are aliases for drivers that use the same method. Therefore the entry in the .log file for the used driver prints the internally used driver name.

driverfallback: This option expects a driver that is used, if the driver could not be detected automatically.

$\hologoDriverSetup \{\langle driver \ option \rangle\}$

The driver can also be configured after package loading using \hologoDriverSetup, also the way for plain TeX to setup the driver.

1.5 Font setup

Some logos require a special font, but should also be usable by plain T_EX . Therefore the package provides some ways to influence the font settings. The options below take font settings as values. Both font commands such as \sline and macros that take one argument like \textsf can be used.

```
\hologoFontSetup {\langle key \ value \ list \rangle}
```

Macro \hologoFontSetup sets the fonts for all logos. Supported keys:

general: This font is used for all logos. The default is empty. That means no special font is used.

bibsf: This font is used for BibTFX with variant sf.

rm: This font is a serif font. It is used for $\varepsilon_X T_E X$.

sc: This font specifies a small caps font. It is used for BibTeX with variant sc.

- **sf:** This font specifies a sans serif font. The default is \sffamily, then \sf is tried. Otherwise a warning is given. It is used by KOMA-Script.
- sy: This is the font for math symbols (e.g. cmsy). It is used by $\mathcal{A}_{\mathcal{M}}\mathcal{S}$, $\mathcal{N}_{\mathcal{T}}\mathcal{S}$, $\varepsilon_{\mathcal{X}}$ TFX.

logo: METAFONT and METAPOST are using that font. In LATEX \logofamily is used and the definitions of package mflogo are used if the package is not loaded. Otherwise the \tenlogo is used and defined if it does not already exists.

Fonts can also be set for a logo or logo component separately, see the following list. The keys are the same as for \hologoFontSetup.

$\langle logo angle$	keys	result
BibTeX	bibsf	ВівТЕХ
BibTeX	SC	$BibT_EX$
ExTeX	rm	$\varepsilon_{\!X}\!\mathrm{TEX}$
SliTeX	rm	$SLiT_EX$
AmS	sy	$\mathcal{A}_{\mathcal{M}}\mathcal{S}$
ExTeX	sy	$\varepsilon_{\!X}\!\mathrm{T}_{\!E}\!\mathrm{X}$
NTS	sy	$\mathcal{N}_{\mathcal{T}}\mathcal{S}$
KOMAScript	sf	KOMA-Script
METAFONT	logo	METAFONT
METAPOST	logo	METAPOST
SliTeX	sc SliT _E X	

1.5.1 Font order

For all logos the font general is applied first. Example:

\hologoFontSetup{general=\color{red}}

will print red logos. Then if the font uses a special font sf, for example, the font is applied that is setup by \hologoLogoFontSetup. If this font is not setup, then the common font setup by \hologoFontSetup is used. Otherwise a warning is given, that there is no font configured.

1.6 Additional user macros

Usually a variant of a logo is configured by using \hologoLogoSetup, because it is bad style to mix different variants of the same logo in the same text. There the following macros are a convenience for testing.

```
\hologoVariant \{\langle name \rangle\}\ \{\langle variant \rangle\}\ \HologoVariant \{\langle name \rangle\}\ \{\langle variant \rangle\}\
```

Logo $\langle name \rangle$ is set using $\langle variant \rangle$ that specifies explicitly which variant of the macro is used. If the argument is empty, then the default form of the logo is used (configurable by \hologoLogoSetup).

\HologoVariant is used if the logo is set in a context that needs an uppercase first letter (beginning of a sentence, ...).

```
\label{logoList} $$ \hologoEntry {$\langle logo\rangle$} {\langle variant\rangle$} {\langle since\rangle$} $$
```

Macro \hologoList contains all logos that are provided by the package including variants. The list consists of calls of \hologoEntry with three arguments starting with the logo name $\langle logo \rangle$ and its variant $\langle variant \rangle$. An empty variant means the current default. Argument $\langle since \rangle$ specifies with version of the package hologo is needed to get the logo. If the logo is fixed, then the date gets updated. Therefore the date $\langle since \rangle$ is not exactly the date of the first introduction, but rather the date of the latest fix.

Before \hologoList can be used, macro \hologoEntry needs a definition. The example file in section 1.8 shows applications of \hologoList .

1.7 Supported contexts

Macros \hologo and friends support special contexts:

- LATEX's protection mechanism.
- Bookmarks of package hyperref.
- Package tex4ht.
- The macros can be used inside \csname constructs, if \ifincsname is available (pdfTEX, XETEX, LuaTEX).

1.8 Example

The following example prints the logos in different fonts.

```
1 (*example)
2 %<<verbatim
3 \NeedsTeXFormat{LaTeX2e}
4 \documentclass[a4paper]{article}
5 \usepackage[
6 hmargin=20mm,
   vmargin=20mm,

3.2 Spacefactor

The space factor must be 1000 after a logo. If it is greater 1000 then the following space is a space after a sentence closing point. If the space factor is smaller 1000 then an immediate following dot is interpreted as abbreviation, not sentence closing point.

```

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/hologo.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/hologo.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain T_EX:

```
tex hologo.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
\begin{array}{lll} hologo.sty & \rightarrow tex/generic/oberdiek/hologo.sty \\ hologo.pdf & \rightarrow doc/latex/oberdiek/hologo.pdf \\ example/hologo-example.tex & \rightarrow doc/latex/oberdiek/example/hologo-example.tex \\ test/hologo-test1.tex & \rightarrow doc/latex/oberdiek/test/hologo-test1.tex \\ test/hologo-test-spacefactor.tex & \rightarrow doc/latex/oberdiek/test/hologo-test-spacefactor.tex \\ test/hologo-test-list.tex & \rightarrow doc/latex/oberdiek/test/hologo-test-list.tex \\ hologo.dtx & \rightarrow source/latex/oberdiek/hologo.dtx \\ \end{array}
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

¹http://ctan.org/pkg/hologo

4.4 Refresh file name databases

If your T_EX distribution (teT_EX, mikT_EX, ...) relies on file name databases, you must refresh these. For example, teT_EX users run texhash or mktexlsr.

4.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain T_EX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hologo.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfIATeX:

```
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
```

5 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is hologo.xml.

```
2668 (*catalogue)
2669 <?xml version='1.0' encoding='us-ascii'?>
2670 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
2671 <entry datestamp='$Date$' modifier='$Author$' id='hologo'>

2676  cense type='lppl1.3'/>
2677
     <version number='1.10'/>
2678
       The package defines a single command <tt>\hologo</tt>, whose
2679
       argument is the usual case-confused ASCII version of the logo.
2680
2681
       The command is bookmark-enabled, so that every logo becomes
2682
       available in bookmarks without further work.
       2683
       The package is part of the xref refid='oberdiek'>oberdiek
2684
       bundle.

7 History

[2010/04/08 v1.0]

• The first version.

[2010/04/16 v1.1]

- \Hologo added for support of logos at start of a sentence.
- \hologoSetup and \hologoLogoSetup added.
- Options break, hyphenbreak, spacebreak added.
- Variant support added by option variant.

[2010/04/24 v1.2]

- LATEX3 added.
- VTEX added.

[2010/11/21 v1.3]

• iniT_EX, virT_EX added.

[2011/03/25 v1.4]

- \bullet ConTEXt with variants added.
- Option discretionarybreak added as refinement for option break.

[2011/04/21 v1.5]

• Wrong TDS directory for test files fixed.

[2011/10/01 v1.6]

- Support for package tex4ht added.
- Support for \csname added if \ifincsname is available.
- New logos: (IA)TEX, biber, BIBTEX (sc, sf), emTEX, ε_X TEX, KOMA-Script, IA, IYX, MiKTEX, $\mathcal{N}_T\mathcal{S}$, OzMF, OzMP, OzTEX, OzTtH, PCTEX, PIC, PICTEX, METAFONT, MetaFun, METAPOST, MetaPost, SIJTEX (lift, narrow, simple), SLITEX (narrow, simple, lift), teTEX.
- Fixes: iniT_EX, pdfI_ET_EX, pdfT_EX, virT_EX.
- \hologoFontSetup and \hologoLogoFontSetup added.
- \hologoVariant and \HologoVariant added.

[2011/11/22 v1.7]

- New logos: BibTeX8, LaTexml, SageTeX, TeX4ht, T_TH .
- X_T and friends: Driver stuff fixed.
- X₇ and friends: Support for italic added.
- X_H and friends: Package support for pgf and pstricks added.

[2011/11/29 v1.8]

• New logos: Hàn Thế Thành.

[2011/12/21 v1.9]

- Patch for package if xetex added for the case that \newif is undefined in iniT_FX.
- Some fixes for iniT_FX.

[2012/04/26 v1.10]

• Fix in bookmark version of logo "Hàn Thế Thành".

[2016/05/12 v1.11]

- Update HOLOGO@IfCharExists (previously in texlive)
- define pdfliteral in current luatex.

[2016/05/16 v1.12]

• Documentation updates.

[2017/05/01 v1.13]

• Removing spurious comments in bibliography. (github PR from yudai-nkt)
